

The **International Partnership for Mitigation and MRV** and the **UNDP Low Emission Capacity Building Programme** have the pleasure to invite you to our Side-Events at COP 21 in the **Moroccan Pavilion**

## **Launch of the Global Good Practice Analysis 2.0 on INDCs, LEDS, NAMAs and MRV**

**7 December, 17.00 - 18:30 pm**

The Global Good Practice Analysis is a joint initiative by the International Partnership on Mitigation and MRV and the UNDP Low Emission Capacity Building Programme. It documents 40 examples of mitigation-related good practice worldwide that demonstrate how INDCs, LEDS, NAMAs and MRV systems are being effectively designed and implemented across a range of national contexts. The resulting good practice case studies provide rich insights from countries on successes and lessons learned that can be disseminated internationally to support increased mitigation ambition.

The objective of the side event will be to present the main findings and lessons learned from the global good practice cases. During a panel discussion, country representatives will provide practice-based insights into effective approaches to achieving mitigation at the country level and showcase lessons learnt from selected cases. Besides, the panel discussion aims at showing the potential of knowledge sharing through networks and partnerships in order to promote mitigation action.
